Module 5: Directives – Multiple Assignment Questions

Section 1: Introduction to Directives

---

1. Identify directive usage

Create a simple Angular page and use at least one directive.
Hint: Use *ngIf or *ngFor.

---

2. Explain what directives do (practical)

Apply directive and observe DOM changes.
Hint: Hide/show element.

---

3. Structural vs Attribute directive

Create example for both types.
Hint: Compare behavior.

---

4. Use directive to control UI rendering

Show or hide content based on condition.
Hint: Boolean variable.

---

5. Combine directives in one component

Use multiple directives in same HTML.
Hint: ngIf + ngFor.

Section 2: ngIf Directive

---

6. Show/Hide element using ngIf

Display message only when condition is true.
Hint: Use boolean variable.

---

7. Toggle visibility using button

Create button to toggle content.
Hint: Click event + ngIf.

---

8. Use ngIf with else block

Display alternative content if condition is false.
Hint: else template.

---

9. Login/Logout UI using ngIf

Show login button if not logged in, logout if logged in.
Hint: Boolean state.

---

10. Conditional form display

Show form only when user clicks button.
Hint: ngIf.

Section 3: ngFor Directive

---

11. Display list using ngFor

Show list of names from array.
Hint: Loop through array.

---

12. Display object list

Show table of students (name, marks).
Hint: ngFor with objects.

---

13. Use index in ngFor

Display index number with each item.
Hint: let i = index.

---

14. Filter data in ngFor

Display only selected items (e.g., marks > 50).
Hint: Use condition before rendering.

---

15. Dynamic list rendering

Add item to array and update UI.
Hint: Push new data.

Section 4: ngSwitch Directive

---

16. Basic ngSwitch usage

Display content based on selected value.
Hint: Use switch case.

---

17. Role-based UI rendering

Show different UI for Admin/User.
Hint: ngSwitchCase.

---

18. Default case handling

Show default message if no match found.
Hint: ngSwitchDefault.

---

19. Dropdown with ngSwitch

Select option from dropdown and display content.
Hint: Bind selected value.

20. Combine ngSwitch with other bindings

Use ngSwitch with ngModel or event binding.
Hint: Dynamic selection.

Section 5: Attribute Directives (ngClass, ngStyle)

21. Apply dynamic class using ngClass

Change class based on condition.
Hint: Boolean condition.

22. Apply multiple classes dynamically

Add/remove multiple classes.
Hint: Object syntax.

23. Dynamic styling using ngStyle

Change text color or background dynamically.
Hint: [ngStyle].

24. Highlight selected item

Highlight selected list item.
Hint: ngClass.

25. Theme switch using ngStyle/ngClass

Create light/dark mode toggle.
Hint: Apply styles dynamically.

Section 6: Custom Directives (Intro)

26. Create custom directive using CLI

Generate directive using Angular CLI.
Hint: ng generate directive highlight.

27. Change background using custom directive

Apply custom directive to change color.
Hint: ElementRef.

28. Use HostListener in directive

Change style on mouse hover.
Hint: Mouse events.

29. Pass value to directive

Send custom color value to directive.
Hint: Input property.

30. Reuse custom directive

Apply same directive to multiple elements.
Hint: Reusability.

Section 7: Real World Practical Tasks

31. Todo list with ngFor

Display tasks dynamically.
Hint: Array rendering.

32. Login system UI with ngIf

Toggle login/logout UI.
Hint: Boolean state.

---

33. Role-based dashboard

Different UI for Admin/User using ngSwitch.
Hint: Switch cases.

---

34. Dynamic theme changer

Switch between themes using ngClass/ngStyle.
Hint: Toggle state.

---

35. Highlight card on hover (custom directive)

Create hover effect using directive.
Hint: HostListener.

Section 8: Interview Thinking Questions

---

36. What are directives in Angular?

Explain with example.

---

37. Difference between structural and attribute directives

Explain clearly.

---

38. How ngIf works internally?

Explain DOM behavior.

39. Difference between ngClass and ngStyle

Explain with use case.

40. What is custom directive?

Explain with real example.
