WEB DEVELOPMENT ASSIGNMENT : 20

Bootstrap Utilities Assignment Questions with Hint

---

1. Create spacing demo layout using Bootstrap spacing utilities

Create page showing different margin and padding spacing values applied to multiple boxes.
Hint: Use m, mt, mb, p, pt, pb classes with size numbers.

---

2. Create card layout using spacing utilities only

Create card layout where spacing between elements is controlled only using Bootstrap spacing classes without custom CSS.
Hint: Combine padding and margin utilities.

---

3. Create text styling demo using Bootstrap text utilities

Create page demonstrating text alignment, text transform and font weight utilities.
Hint: Use text center, text uppercase and fw bold classes.

---

4. Create colored alert messages using text and background utilities

Create different colored message boxes using Bootstrap color utilities.
Hint: Use text color and background color utility classes.

---

5. Create responsive text alignment layout

Create layout where text is left aligned on mobile, center aligned on tablet and right aligned on desktop.
Hint: Use responsive text alignment utility classes.

---

6. Create layout using display utilities

Create layout where some elements are hidden on mobile but visible on desktop.
Hint: Use display none and display block responsive classes.

---

7. Create flex layout using Bootstrap flex utilities

Create layout where items are aligned center and spaced evenly using only Bootstrap flex utilities.
Hint: Use d flex, justify content and align items classes.

---

8. Create responsive navigation alignment using flex utilities

Create navigation where menu items move to center or right side based on screen size.
Hint: Use responsive flex justify classes.

---

9. Create position based layout using Bootstrap position utilities

Create layout where one element is fixed at top or bottom of page.
Hint: Use position fixed and top or bottom utilities.

---

10. Create badge notification position layout

Create notification badge positioned at top corner of icon.
Hint: Use position relative and position absolute utilities.

---

11. Create sticky header using position utilities

Create header that stays visible at top while scrolling.
Hint: Use position sticky and top value.

---

12. Create responsive flex direction layout

Create layout where flex direction changes from row to column on small screen.
Hint: Use responsive flex direction classes.

---

13. Create full height centered layout using utilities

Create layout where content is centered vertically and horizontally using Bootstrap utilities only.
Hint: Use d flex, justify content center and align items center with vh height.

---

14. Create overlay text on image using position utilities

Create image with text overlay placed at center.
Hint: Use position relative for parent and absolute for text.

---

15. Create responsive visibility layout using display utilities

Create layout where some content appears only on mobile and some only on desktop.
Hint: Use display responsive classes.
