WEB DEVELOPMENT ASSIGNMENT : 24

Bootstrap Customization Large Assignment Questions

---

1. Create Custom Theme Based E Commerce Website

Create e commerce homepage using Bootstrap but override default colors, buttons and card styles using custom CSS. Create your own theme color palette and apply across website.
Hint: Override Bootstrap variables or write custom CSS after Bootstrap file. Maintain consistent color scheme.

---

2. Create Company Branding Theme Using Bootstrap Customization

Create company branding UI where navbar, buttons, alerts and cards follow company brand colors and font style instead of default Bootstrap theme.
Hint: Use custom CSS classes and override Bootstrap utility classes carefully.

---

3. Create Dark Mode And Light Mode Theme Switcher

Create webpage with toggle button to switch between dark theme and light theme using Bootstrap base and custom CSS.
Hint: Use custom class on body and change colors using CSS variables or custom styles.

---

4. Customize Bootstrap Form Styles For Modern UI

Create modern form design by overriding Bootstrap input border radius, focus color, button styles and spacing.
Hint: Override form control, btn and focus styles using custom CSS file.

---

5. Create Custom Card Design Library Using Bootstrap Base

Create reusable custom card design system using Bootstrap card base but with custom shadow, border, spacing and hover effects.
Hint: Extend Bootstrap classes instead of fully replacing them.

---

6. Create Custom Dashboard Theme Using Bootstrap And Custom CSS

Create dashboard UI with custom sidebar color, custom header design and custom table styling while still using Bootstrap grid and layout.
Hint: Combine Bootstrap layout with custom UI layer.

7. Create Custom Utility Classes Along With Bootstrap

Create custom utility classes like custom spacing, custom text color and custom background classes and use along with Bootstrap utilities.
Hint: Follow Bootstrap naming style for maintainability.

---

8. Optimize Bootstrap Project Using Best Practices

Create sample project where Bootstrap CSS is optimized by removing unused classes and adding only required custom styles.
Hint: Learn Bootstrap build customization or selective import if possible.

---

9. Create Fully Custom Button Design System

Create multiple custom button types like gradient buttons, outline buttons and animated buttons based on Bootstrap button base class.
Hint: Extend btn class and create new custom button classes.

---

10. Create Custom Responsive Layout Without Breaking Bootstrap Grid

Create layout customization using custom CSS but without breaking Bootstrap responsive grid behavior.
Hint: Avoid overriding container, row and column core layout rules.

---

11. Create Custom Alert Design With Animation

Create custom alert styles with animation effects using Bootstrap alert base and custom CSS.
Hint: Add animation using custom keyframes.

---

12. Create Multi Theme Support System

Create system where user can switch between multiple themes like blue theme, green theme and dark theme.
Hint: Use theme wrapper classes or CSS variables.

---

13. Create Custom Navbar Style Framework

Create multiple navbar style variations like transparent navbar, gradient navbar and shadow navbar.
Hint: Extend navbar class and apply modifier classes.

---

14. Create Custom Bootstrap Based UI Component Library

Create small UI component library using Bootstrap base but with custom design for cards, buttons, forms and alerts.
Hint: Maintain reusable class structure.

---

15. Create Production Ready Bootstrap Project Structure

Create project structure where Bootstrap, custom CSS, custom JS and theme files are properly separated following best practices.
Hint: Maintain clean folder structure and avoid inline CSS overrides.
